I have tried Glucocare capsules of Sri Ram Herbals on two Adult type Diabetic Mellitus patients one aged 40 years & the other 42 years...

The 1st one is a newly diagnosed case with Fasting Blood sugar level of 142mgs & Post Prandial level 256mgs/dl... He was not being put on any Allopathic preparations to control his condition. Being a new case I tried purely on Glucocare capsules of Sri Ram Herbals...

I advised to use Glucocare 2capsules 30 mts before breakfast & and 2 capsules before lunch.. I was monitoring and constantly watching his blood sugar levels...

After 10 days, to the patient's as well as to my satisfaction , the blood sugar levels came down with in normal limits with Fasting level level being 92mgs & post prandial being 124mgs.. and still continues to be under control and the patient is continuing the medication as being advised.....

The patient is satisfied with Glucocare as he is feeling comfortable,active & satisfied with the response...

The 2nd case was an established Type 2 NIDDM for many years and he was also being put on Glucocare 2caps before breakfast & 2 before dinner,,, After 10 days he could reduce the Daonil & Metformin

which he was using for long... This case has to be monitored & reviewed after some more time before giving more information... I feel Glucocare is showing results...
